

HARVESTING TIME

Cinnamon bark is harvested twice a year immediately after each of the rainy seasons when the humidity makes the bark peel more easily. The trees are first harvested when they are three years old, one year after pruning. The side stems that are about three years old are removed and the bark is stripped off. Cinnamon bark is only obtained from stems that are between 1.2 and 5cm in diameter.

TYPE OF CINNAMON

1. Powder Cassia

- + Moisture: 13.5%
- + max Oil content: 1-3%
- + Reddish colour
- + Packing: PP, PE (net 20-30kg)
